experience

Frontend Software Engineer | One&All (NGO)

July 2022 - present

- Currently a team member in end-to-end development in cross-functional experience teams with engineers, PMs, marketing, legal, content designers and organization leadership.

- Refined front-end services focused on improving the value of One&All's membership across desktop and mobile interfaces.

- Key projects include updating the CMS, securing members' personal information, simplifying the platforms.

E-Menu Developer | Aduke Nigerian Cuisine

August 2022 - present

- Developed, integrated and deployed the e-menu from the usual book format to a fully functional web App leading to saving on the cost of printing by 65% estimated for new expansion.

- Generated a QR code that facilitated easy user access to the e-menu thereby improving customer experience and fast decision making at point of order and reducing in-store wait time by 45% usually caused by front-desk having to explain the each item on the menu.

- Led technical orientation to intimate personnel with the product to attain proficiency in helping users/customers have the best experience and also facilitate prompt updating and debugging.
- Consulted with the management and planning team towards implementing the ordering functionality which will lead to an increased 15% profit margin.

independent projects

Gyms-Gold | Fitness App | ReactJS, NextJS, RapidAPI
- Effectively used the Exercises and Youtube API's to build a fully functional exercise assistant that allows the average 10 weekly users access various kinds of exercisers and a video instruction to further enhance the exercise experience.

Omnifood/Bankist | Landing Pages App | HTML, CSS, JavaScript - Developed a fully responsive web pages with the latest semantics of HTML5, CSS3 and JavaScript to attain better proficiency with the technologies

Other projects: Admin Dashboard, PigGame, Bankist Transaction App, MovieLand.
